Mobile Sales Analytics Report

Power BI Dashboard — Sales Performance Analysis

Prepared by: Israr Shekh
Report generated: 28 July 2026
Data period reflected: March (monthly slicer)

1. Executive Summary

This report summarizes performance data captured in the **Motorola Mobile Sales Analytics** Power BI dashboard. The dashboard tracks sales, quantity sold, transaction volume, and customer behavior across mobile brands, models, cities, payment methods, and time periods. The snapshot below reflects the dashboard filtered to the month of **March**.

2. Dashboard Overview

Figure 1: Motorola Mobile Sales Analytics — Power BI Dashboard (March view)

3. Brand-Wise Performance

Brand	Total Sales (₹)	Total Quantity	Transactions	Avg. Sale per Transaction
OnePlus	5,734,561	139	31	~184,986
Vivo	5,336,939	117	22	~242,588
Xiaomi	5,142,955	133	27	~190,480
Samsung	4,718,651	141	27	~174,765

Apple	4,638,973	108	21	~220,904
-------	-----------	-----	----	----------

Top Performer OnePlus leads in total sales value (₹5.73M), while Samsung sells the highest unit volume (141 units) but at a lower average ticket size — indicating Samsung's demand is driven by lower-priced models. Apple has the fewest transactions and units sold, but a high average sale value per transaction, consistent with its premium pricing.

4. Top-Selling Mobile Models

Rank	Model	Total Sales (₹)
1	OnePlus 9	2.6M
2	Redmi 9	2.5M
3	Vivo V20	2.5M

OnePlus 9 is the single best-selling model, closely followed by Redmi 9 and Vivo V20, together forming the top three revenue-generating products on the platform.

5. Payment Method Analysis

Payment Method	Share of Transactions
Cash	43.24%
Debit Card	24.32%
UPI	18.93%
Credit Card	13.51%

Cash remains the dominant payment mode (43.24% of transactions), followed by Debit Card and UPI. Credit Card usage is the lowest, suggesting an opportunity to promote digital/UPI incentives to shift transaction mix toward faster, traceable payment channels.

6. Sales by Day of Week

Day	Total Sales
Thursday	2.6M
Saturday	1.3M
Monday	1.1M
Friday	0.8M
Sunday	0.7M
Wednesday	0.6M
Tuesday	0.5M

Thursday is by far the strongest sales day (2.6M), roughly double the next-best day (Saturday, 1.3M). Sales taper off through the week, with Tuesday recording the lowest sales — a useful signal for scheduling promotions or staffing.

7. Customer Ratings

Rating (Stars)	Number of Responses
5	20
4	6
2	5
3	4
1	2

Out of 37 rated transactions, 20 (~54%) received the top 5-star rating, indicating strong overall customer satisfaction. However, a combined 11 responses fall at 3 stars or below, which merits a closer look into service or product issues behind the lower ratings.

8. Geographic Distribution

Sales activity spans major cities across India, including Delhi, Mumbai, Bangalore, Chennai, Kolkata, Ludhiana, Jodhpur, Bhopal, Kanpur, Indore, Gorakhpur, Coimbatore, and Madurai — reflecting a nationwide customer base across both metro and tier-2 cities.

9. Key Insights

- OnePlus is the top revenue-generating brand; Samsung leads in unit volume but at lower price points.
- OnePlus 9, Redmi 9, and Vivo V20 are the top three best-selling models overall.
- Cash is still the most-used payment method (43%), ahead of digital options combined.
- Thursday drives the highest sales volume of the week — nearly double any other day.
- Customer satisfaction is generally strong (54% five-star ratings), but ~30% of ratings are 3 stars or below.
- Customer base is geographically diverse, covering metro and tier-2 cities across India.

10. Recommendations

- Run targeted promotions on low-sales days (Tuesday, Wednesday) to smooth weekly demand.
- Incentivize digital payments (UPI/Credit Card) to reduce cash dependency and transaction friction.
- Investigate causes behind 3-star-and-below ratings to identify service or product improvement areas.
- Bundle high-performing models (OnePlus 9, Redmi 9, Vivo V20) in cross-sell or upsell campaigns.
- Expand marketing focus in tier-2 cities showing traction (Ludhiana, Jodhpur, Indore) to grow volume.

11. Data Source
